

TANG HO TRUNG NAM - SOFTWARE ENGINEER

0865346424 | thtn.1611.dev@gmail.com | HCMC | <https://trungnamdev.vercel.app>

SUMMARY

Software Engineer with 3 years of experience in .NET Backend and Full-stack development. Skilled in building scalable APIs and distributed systems using C#, Redis, RabbitMQ, and SQL databases. Experienced in system optimization, third-party integrations, authentication (OAuth2/SSO), and cloud-ready architectures.

TECHNOLOGY STACK

Programming language	.NET C#, Go, Python, Javascript
Frameworks & Libraries	ASP.NET Core, Entity Framework, FastAPI, NextJs...
Databases & Caching	SQL Server, PostgreSQL, MongoDB, Redis
Other skills	OAuth2 OIDC, Clean Architecture, AI Coding Tools
Infrastructure	Azure Cloud, Docker, RabbitMQ, Prometheus, Grafana

WORK EXPERIENCE

LizAI

Backend - Software Engineer | 09/2025 - Now

- Designed scalable REST APIs and optimized PostgreSQL, dynamic filtering, indexing, and rate limiting.
- Built chatbot integrations for Meta and Zalo OA with asynchronous webhook processing using queues.
- Developed secure payment with Stripe and ZaloPay, including recurring billing and automated refunds.
- Implemented messaging service communication and monitoring with Prometheus and Alertmanager.

Vietstock

Software Developer | 10/2023 - 09/2025

- Developed and maintained backend services and RESTful APIs using C# and .NET.
- Optimized complex SQL queries and stored procedures for large-scale financial datasets.
- Implemented secure authentication with OAuth 2.0 and OpenID Connect (OIDC).
- Built scalable real-time notification systems using SignalR and Redis.

PROJECTS

Engage Project - LizAI

Backend | 01/2026 - 06/2026

Technologies: .NET 8, EF Core, Redis, PostgreSQL, RabbitMQ, Hangfire

Description & Contributions

- Benchmarked webhook processing architecture at **1000+ req/s per instance** using Redis, Message Queue processing, idempotency controls, retry mechanisms, and horizontal scaling.
- Developed payment processing systems with distributed locking, transactional consistency, and idempotent webhook handling for Stripe and ZaloPay integrations.

- Reduced database latency through PostgreSQL query and indexing optimizations, supporting high-throughput API workloads.
- Increased system resilience by integrating AI workloads via message queues and DLQ failure recovery.

Uplizd Project- LizAI

Backend | 09/2025 - Now

Technologies: .NET 8, EF Core, Redis, PostgreSQL, Python FastAPI, RabbitMQ, Prometheus

Description & Contributions

- Optimized legacy APIs (resolved N+1 queries, improved performance & security with rate limiting, refresh tokens, and permission system)
- Built monitoring & alerting system using Prometheus (blackbox exporter, remote write) for multi-organization services
- Enhanced complex filtering APIs using EF Core & Expression Trees
- Developed AI workflow template marketplace (versioning, release management)

Virtual Stock Exchange Platform - Vietstock

Full-stack Developer / Core Team Member | 12/2024 - 08/2025

Technologies: ASP.NET 8, Redis, SignalR, Quartz.NET, RabbitMQ + MassTransit, React, Zustand, Tailwind CSS

Description & Contributions

- Re-engineered a legacy trading simulator into a unified ASP.NET 8 system with async processing (RabbitMQ/MassTransit), real-time streaming (SignalR + Redis), and automated batch jobs (Quartz.NET), achieving ~30% performance improvement and ~2× throughput, validated via load and stress testing using JMeter, k6, and Application Insights.

SSO Identity Server - Vietstock

Full-stack Developer | 12/2023 - 03/2024

Technologies: ASP.NET 6, IdentityServer, Redis, jQuery, OAuth 2.0 / OpenID Connect.

Description

- Built a centralized SSO platform compliant with OAuth 2.0 and OpenID Connect (OIDC), featuring a management portal for users, roles, and client administration, Redis-backed token caching for performance and scalability, and real-time audit logging of security and administrative events.

CERTIFICATIONS

- GitHub Foundations - Github - 2025 - [Verify Link](#)
- Containers with Docker, Kubernetes & OpenShift - Coursera - 2024

EDUCATION

Industrial University of Ho Chi Minh City

Computer Engineering | 2019 - 2023

GPA: 3.2/4
